Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

Andengradspolynomiet

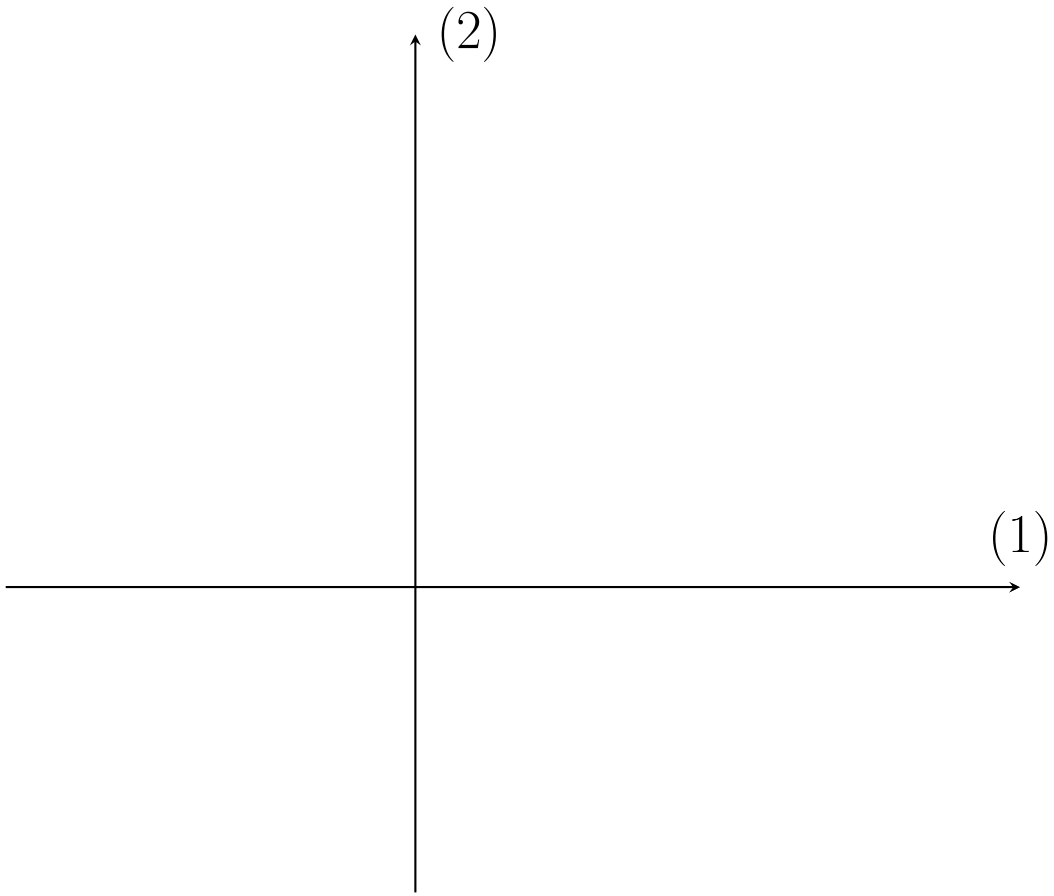
$$y = a \cdot x^2 + b \cdot x + c$$

Grafen skærer 2. aksen i punktet $(0,c)$.

Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

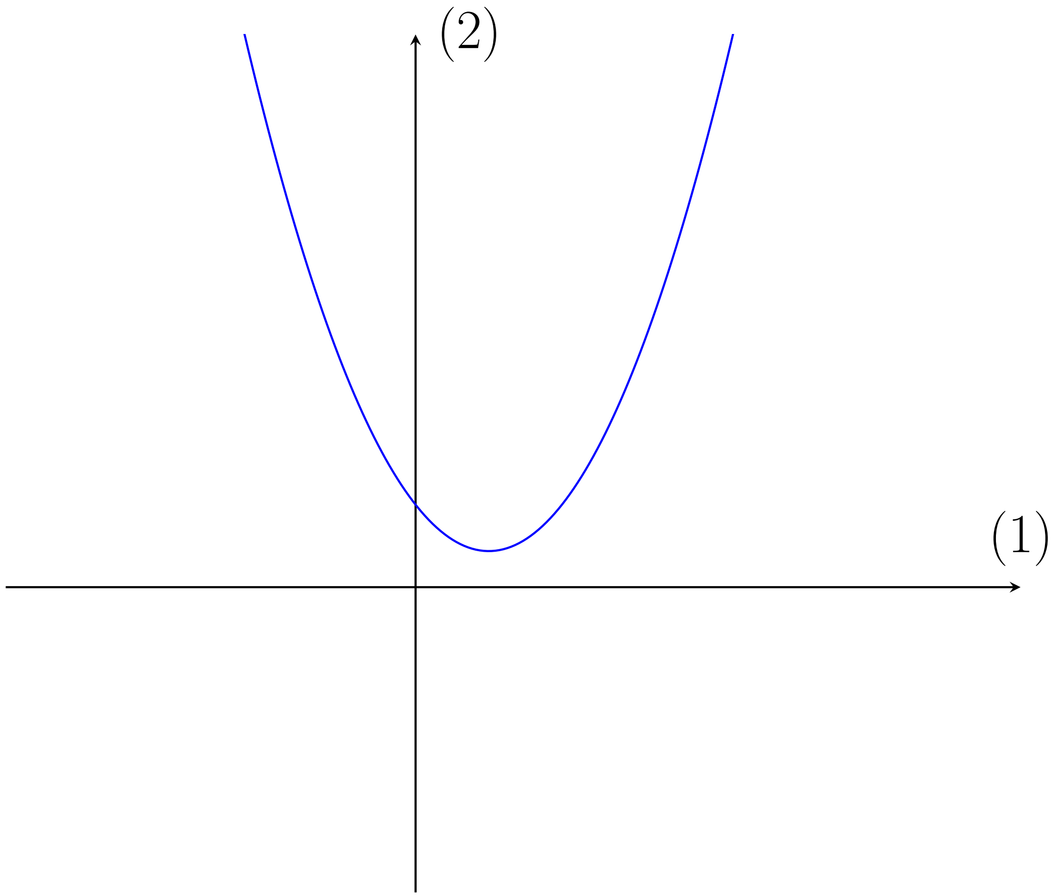
Grafen skærer 2. aksen i punktet $(0, c)$.



Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

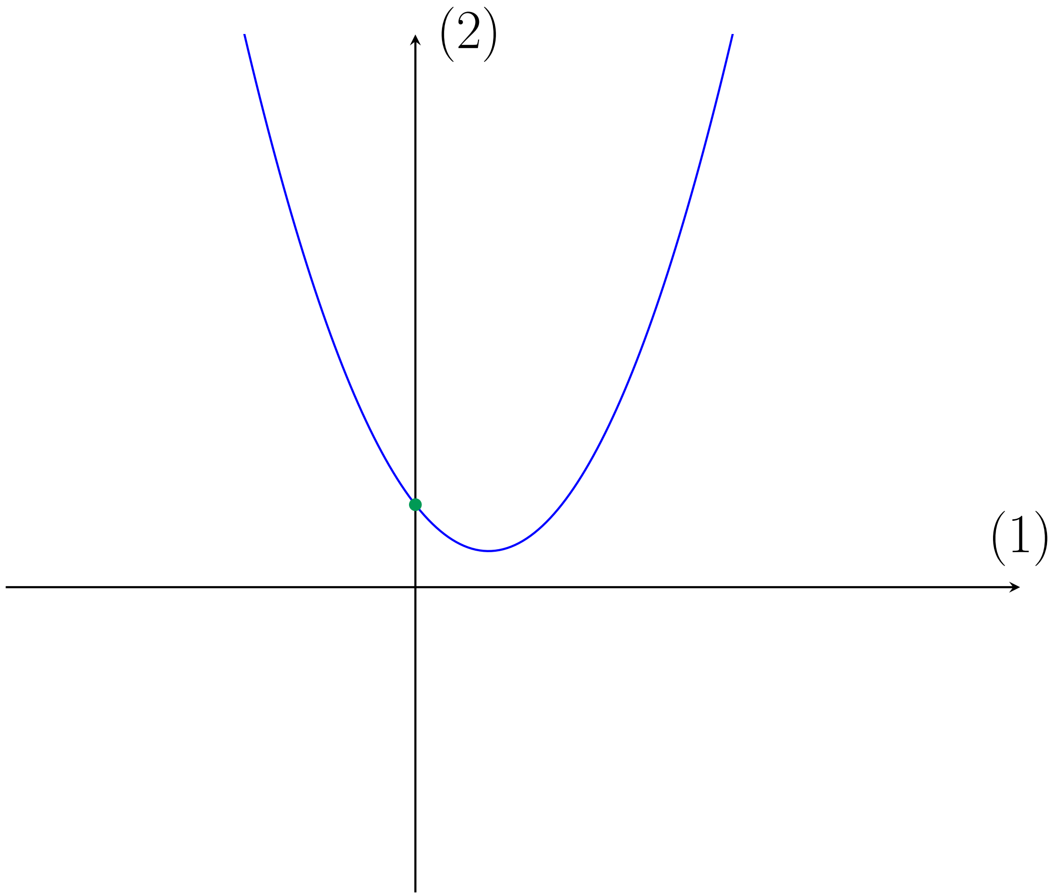
Grafen skærer 2. aksen i punktet (0,c).



Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

Grafen skærer 2. aksen i punktet $(0,c)$.

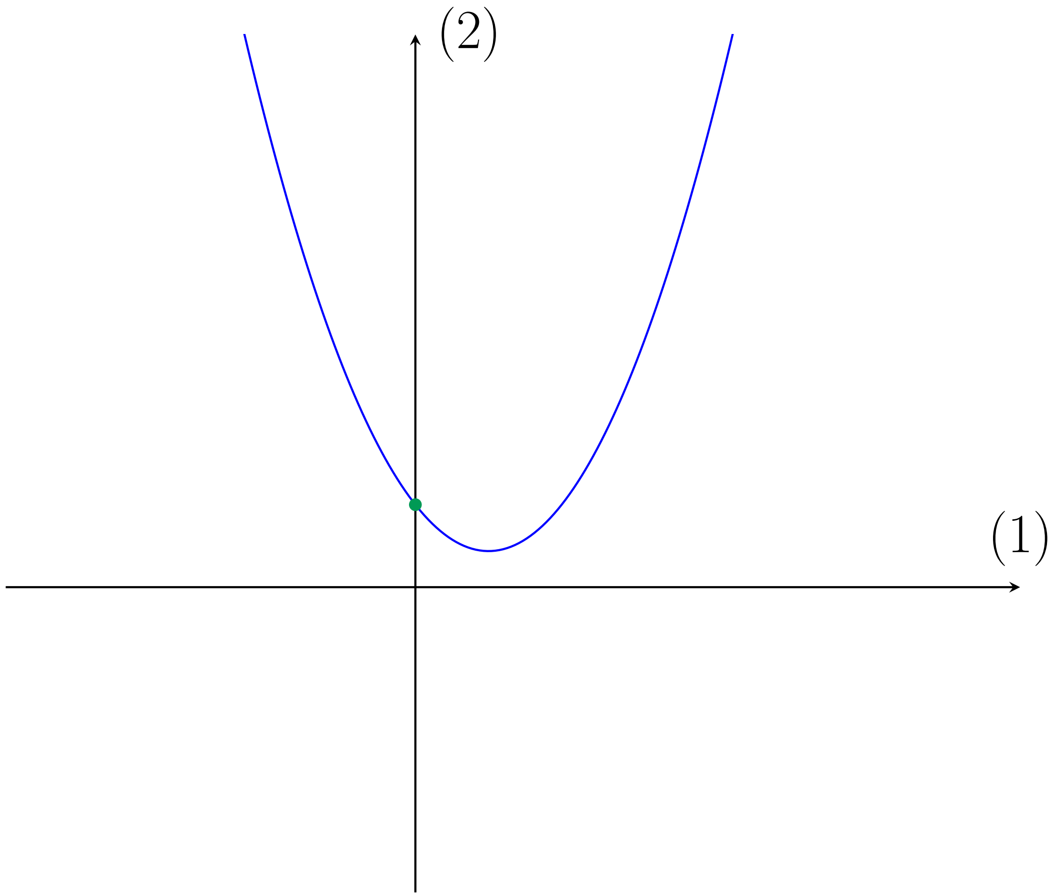


Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

Grafen skærer 2. aksen i punktet (0,c).

$$y = a \cdot 0^2 + b \cdot 0 + c$$



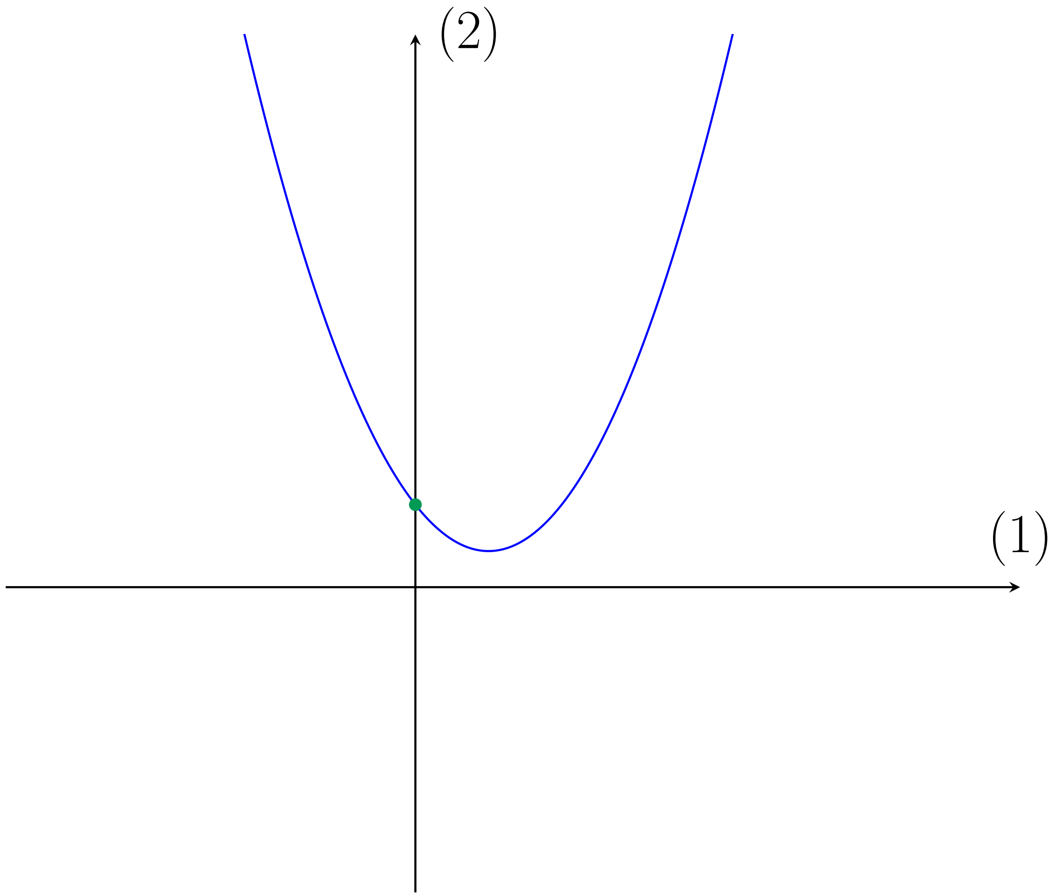
Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

Grafen skærer 2. aksen i punktet (0,c).

$$y = a \cdot 0^2 + b \cdot 0 + c$$

$$y = c$$



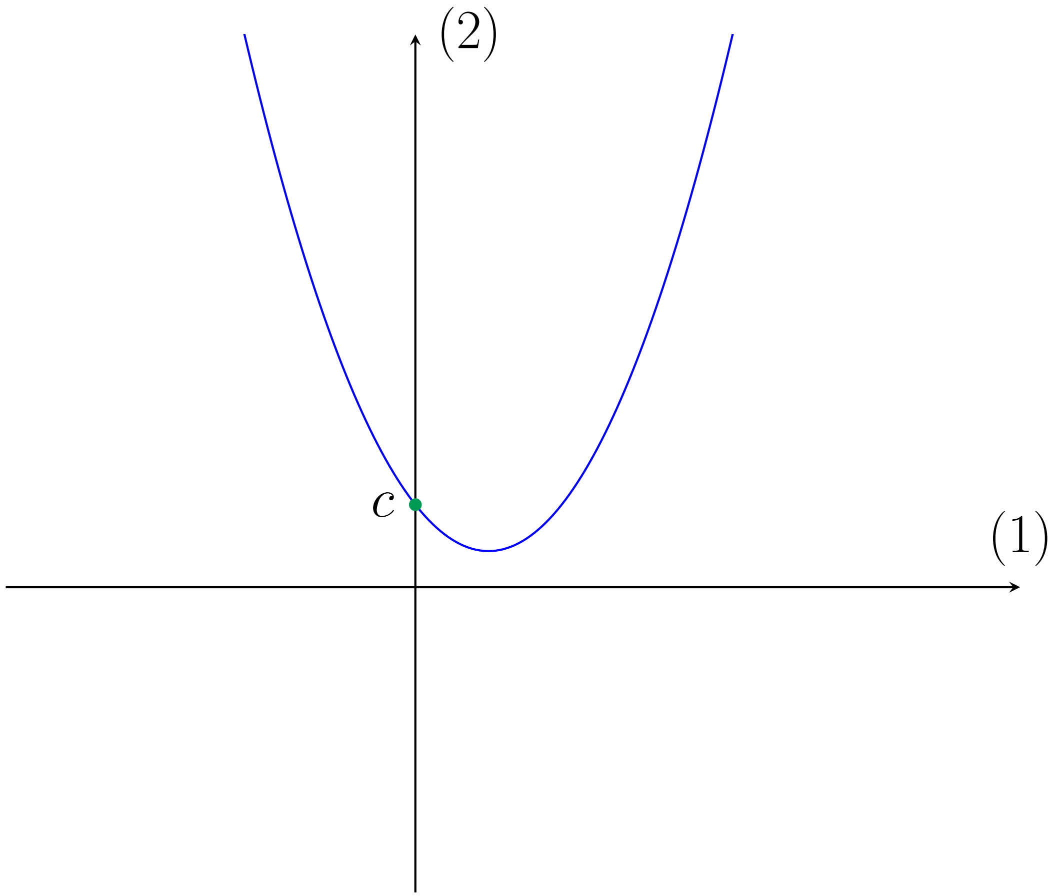
Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

Grafen skærer 2. aksen i punktet (0,c).

$$y = a \cdot 0^2 + b \cdot 0 + c$$

$$y = c$$



Andengradspolynomiet

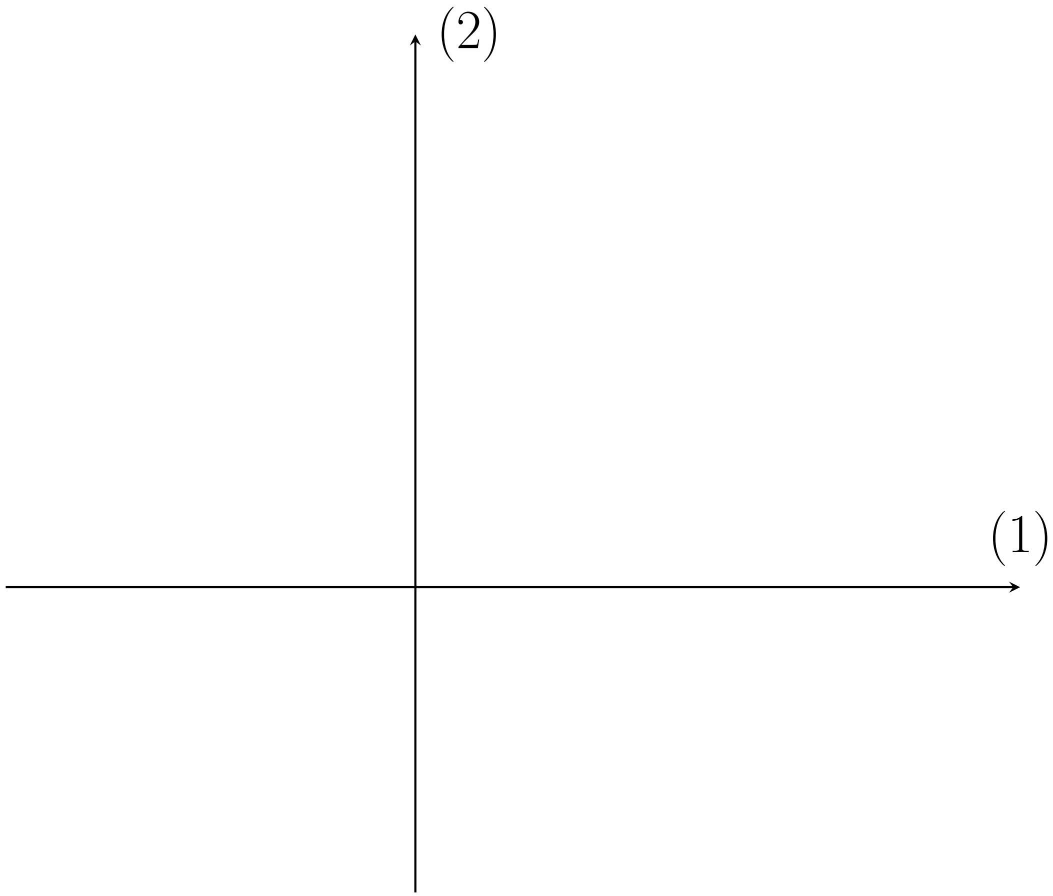
$$y = a \cdot x^2 + b \cdot x + c$$

c forskyder grafen parallelt med 2. aksen.

Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

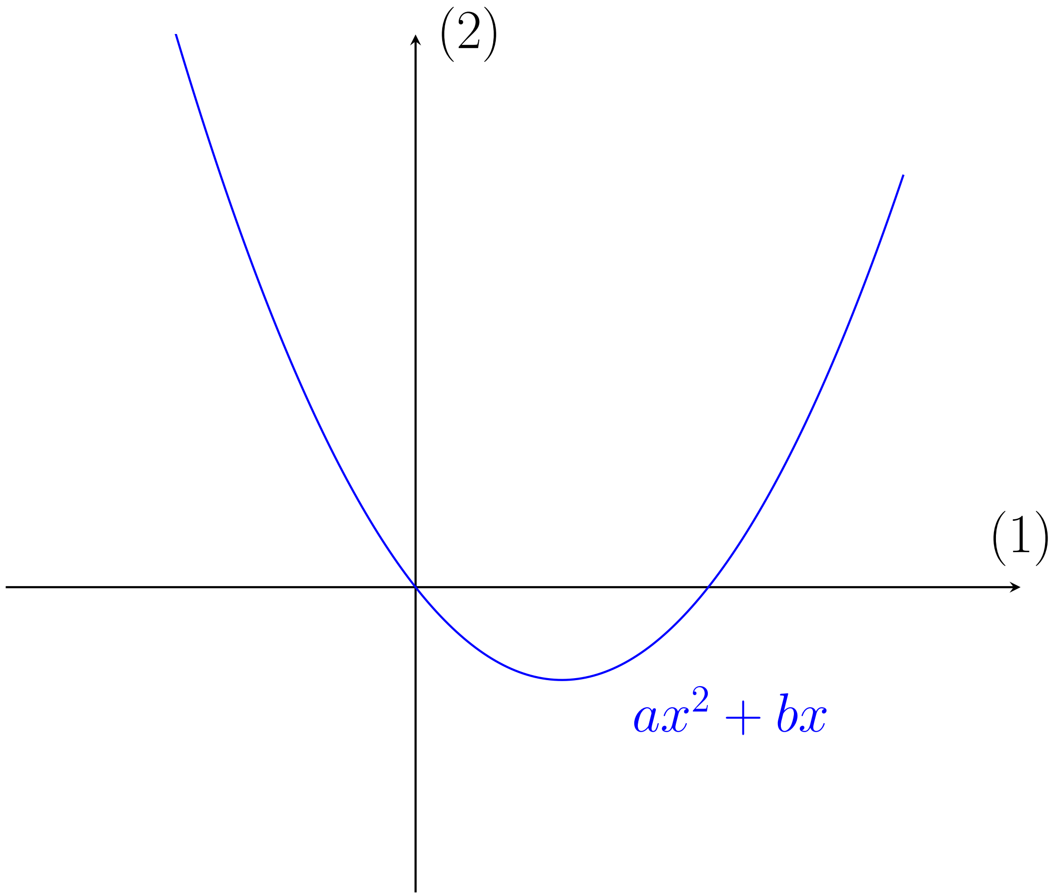
c forskyder grafen parallelt med 2. aksen.



Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

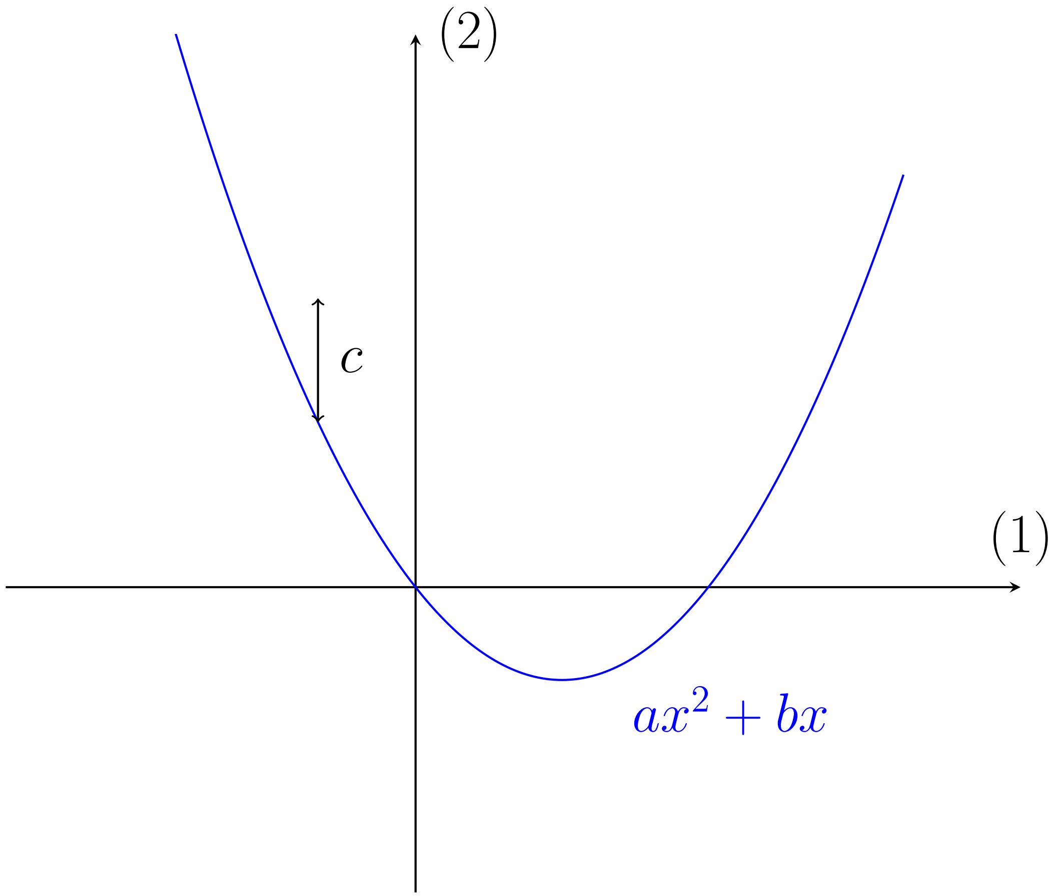
c forskyder grafen parallelt med 2. aksen.



Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

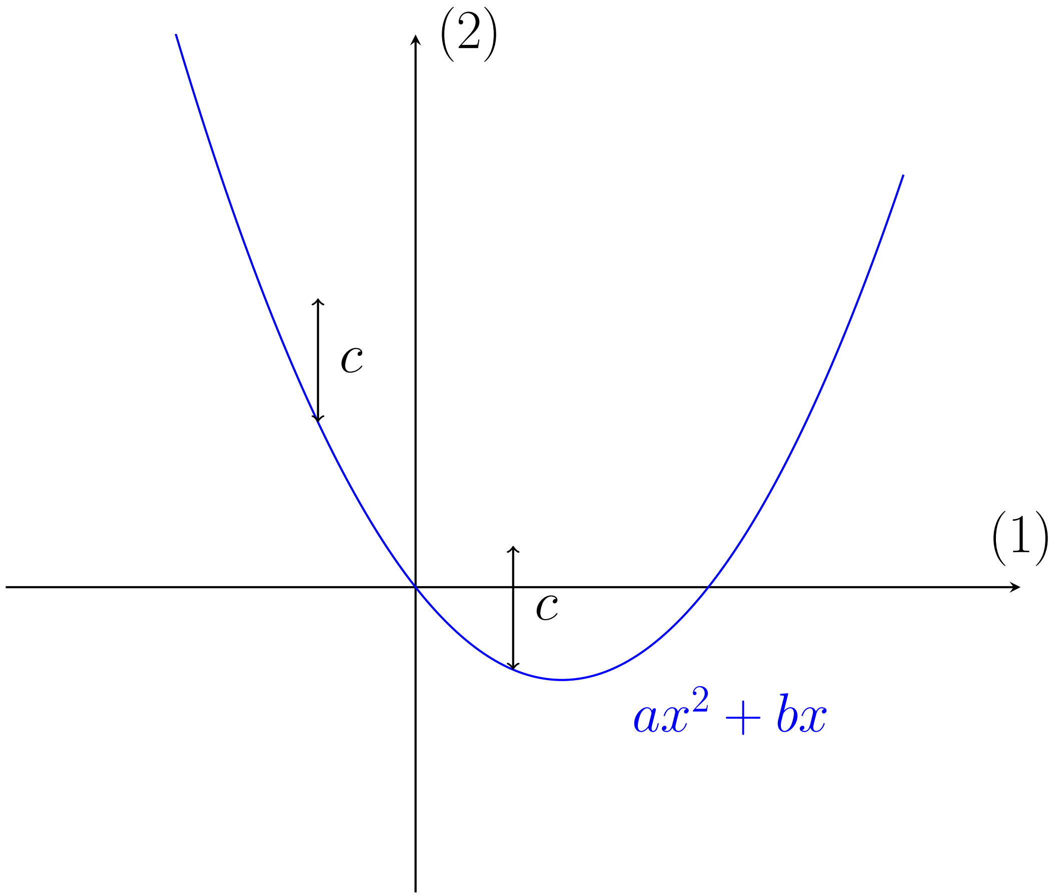
c forskyder grafen parallelt med 2. aksen.



Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

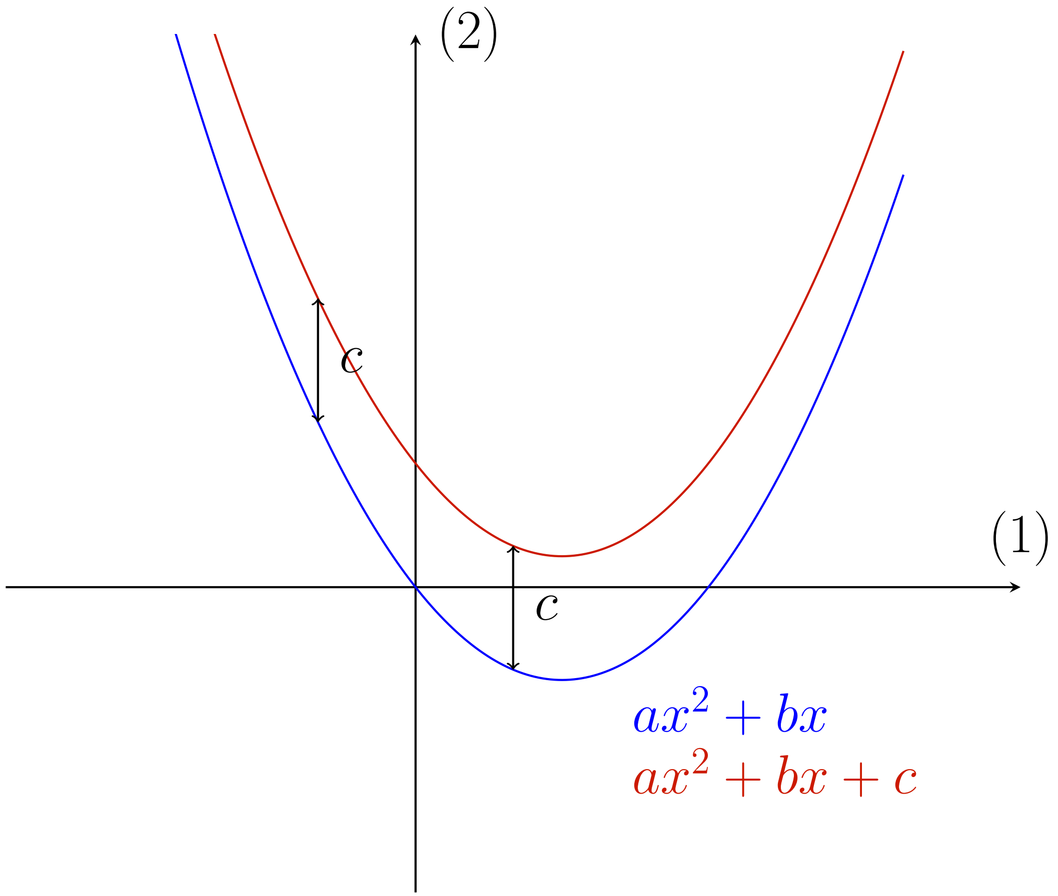
c forskyder grafen parallelt med 2. aksen.



Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

c forskyder grafen parallelt med 2. aksen.



Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

s forskyder grafen parallelt med 1. aksen.

$$s = -\frac{b}{2a}$$

$$y = a \cdot (x - s)^2 + p$$

Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

s forskyder grafen parallelt med 1. aksen.

$$s = -\frac{b}{2a}$$

$$y = a \cdot (x - s)^2 + p$$

$$y = a \cdot x^2 - 2 \cdot a \cdot s \cdot x + a \cdot s^2 + p \qquad (a - b)^2 = a^2 - ab - ab + b^2$$

Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

s forskyder grafen parallelt med 1. aksen.

$$s = -\frac{b}{2a}$$

$$y = a \cdot (x - s)^2 + p$$

$$y = a \cdot x^2 + \underbrace{-2 \cdot a \cdot s}_{b} \cdot x + \underbrace{a \cdot s^2 + p}_{c}$$

Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

s forskyder grafen parallelt med 1. aksen.

$$s = -\frac{b}{2a}$$

$$y = a \cdot (x - s)^2 + p$$

$$y = a \cdot x^2 + \underbrace{-2 \cdot a \cdot s}_{b} \cdot x + \underbrace{a \cdot s^2 + p}_{c}$$

$$b = -2 \cdot a \cdot s$$

Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

s forskyder grafen parallelt med 1. aksen.

$$s = -\frac{b}{2a}$$

$$y = a \cdot (x - s)^2 + p$$

$$y = a \cdot x^2 + \underbrace{-2 \cdot a \cdot s}_{b} \cdot x + \underbrace{a \cdot s^2 + p}_{c}$$

$$b = -2 \cdot a \cdot s$$

$$-\frac{b}{2 \cdot a} = s$$

Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

s forskyder grafen parallelt med 1. aksen.

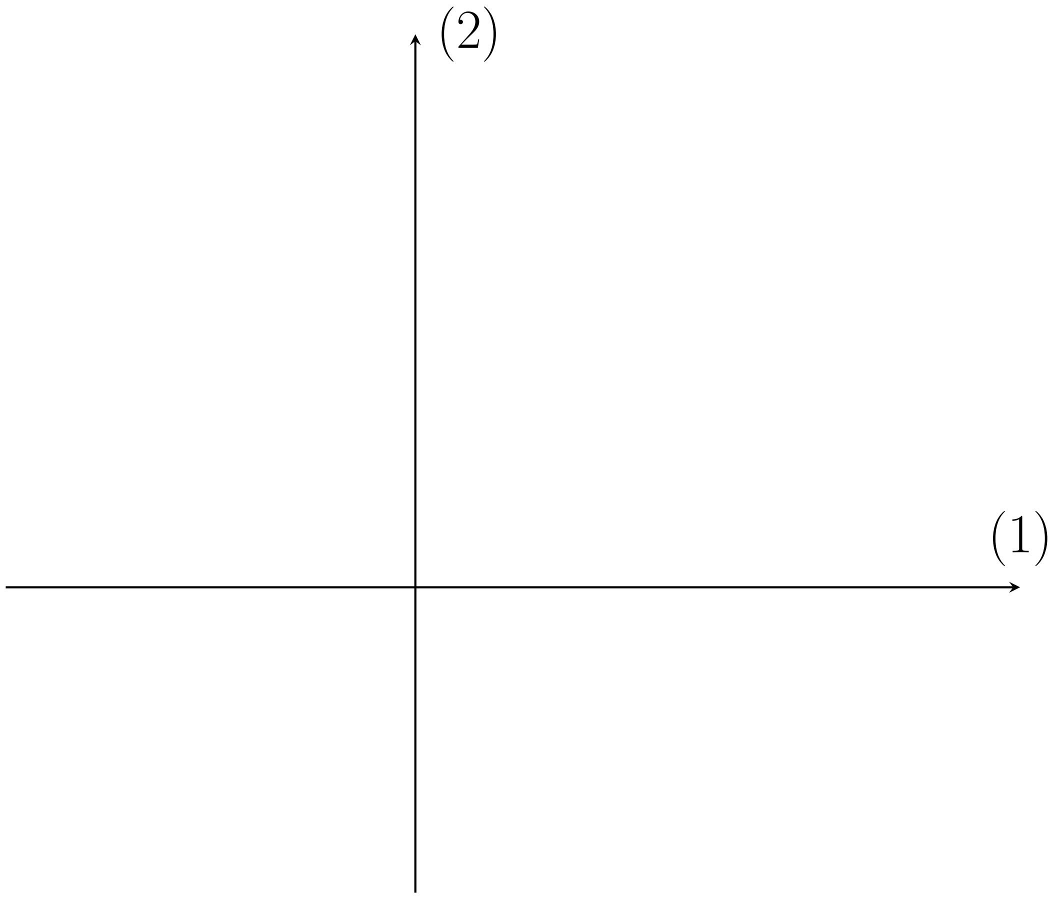
$$s = -\frac{b}{2a}$$

$$y = a \cdot (x - s)^2 + p$$

$$y = a \cdot x^2 + \underbrace{-2 \cdot a \cdot s}_{b} \cdot x + \underbrace{a \cdot s^2 + p}_{c}$$

$$b = -2 \cdot a \cdot s$$

$$-\frac{b}{2 \cdot a} = s$$



Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

s forskyder grafen parallelt med 1. aksen.

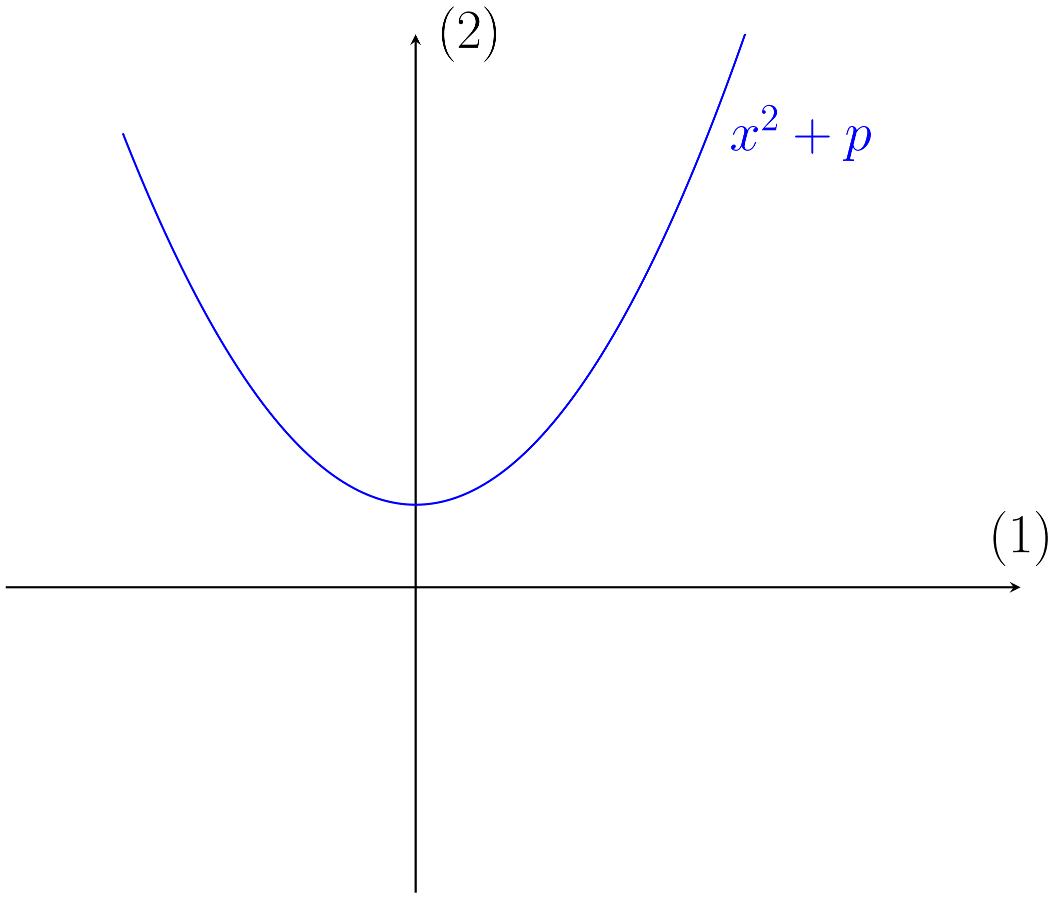
$$s = -\frac{b}{2a}$$

$$y = a \cdot (x - s)^2 + p$$

$$y = a \cdot x^2 + \underbrace{-2 \cdot a \cdot s}_{b} \cdot x + \underbrace{a \cdot s^2 + p}_{c}$$

$$b = -2 \cdot a \cdot s$$

$$-\frac{b}{2 \cdot a} = s$$



Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

s forskyder grafen parallelt med 1. aksen.

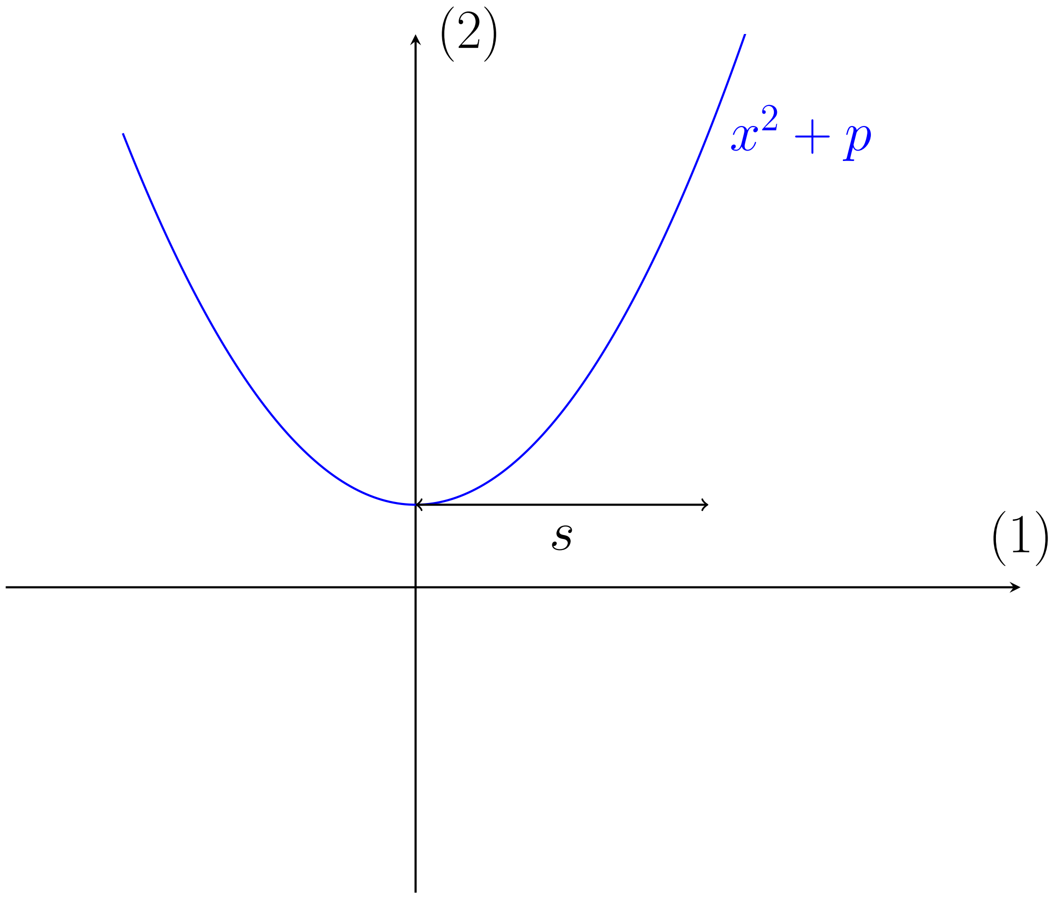
$$s = -\frac{b}{2a}$$

$$y = a \cdot (x - s)^2 + p$$

$$y = a \cdot x^2 + \underbrace{-2 \cdot a \cdot s}_{b} \cdot x + \underbrace{a \cdot s^2 + p}_{c}$$

$$b = -2 \cdot a \cdot s$$

$$-\frac{b}{2 \cdot a} = s$$



Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

s forskyder grafen parallelt med 1. aksen.

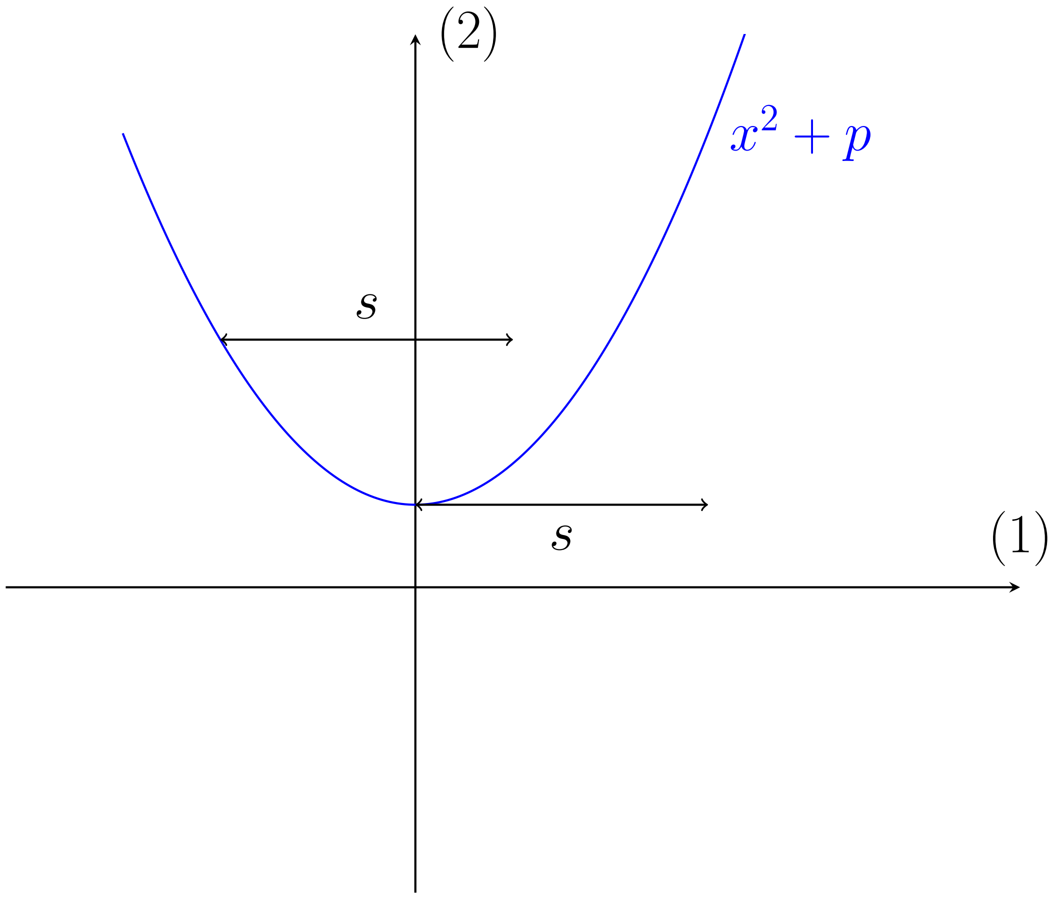
$$s = -\frac{b}{2a}$$

$$y = a \cdot (x - s)^2 + p$$

$$y = a \cdot x^2 + \underbrace{-2 \cdot a \cdot s}_{b} \cdot x + \underbrace{a \cdot s^2 + p}_{c}$$

$$b = -2 \cdot a \cdot s$$

$$-\frac{b}{2 \cdot a} = s$$



Andengradspolynomiet

$$y = a \cdot x^2 + b \cdot x + c$$

s forskyder grafen parallelt med 1. aksen.

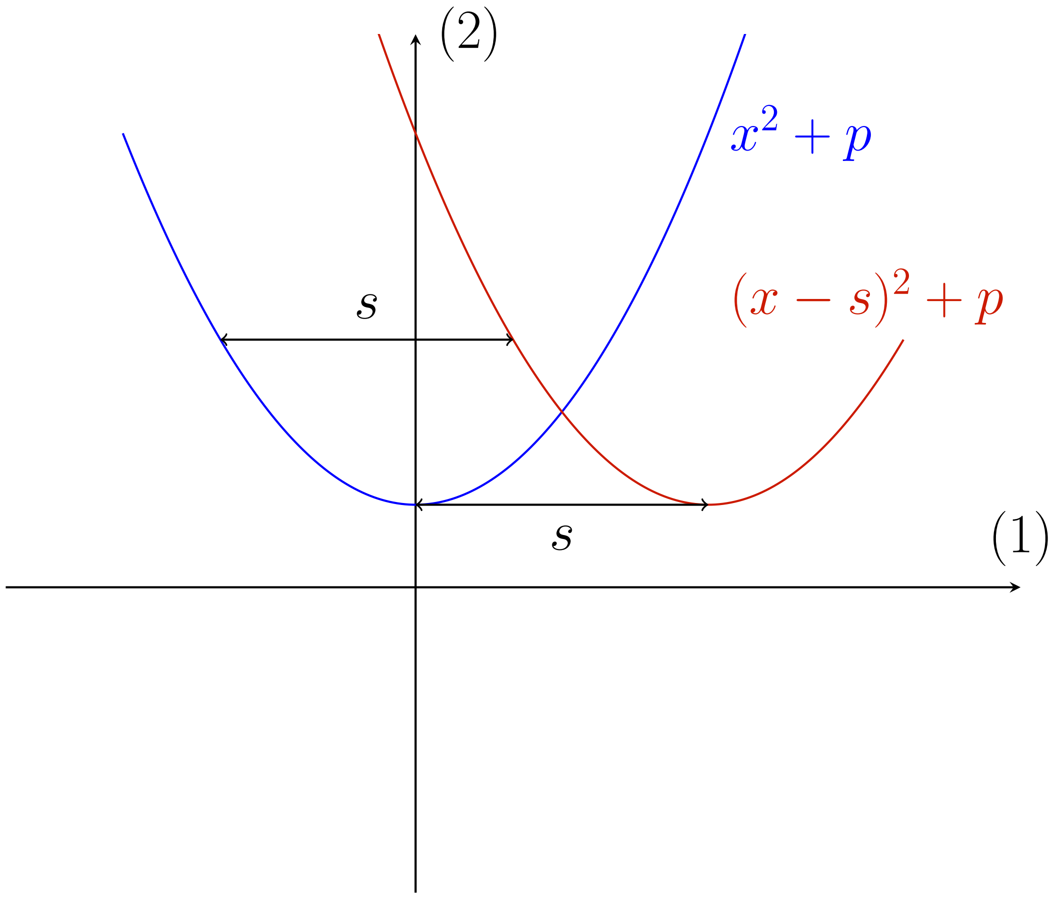
$$s = -\frac{b}{2a}$$

$$y = a \cdot (x - s)^2 + p$$

$$y = a \cdot x^2 + \underbrace{-2 \cdot a \cdot s}_{b} \cdot x + \underbrace{a \cdot s^2 + p}_{c}$$

$$b = -2 \cdot a \cdot s$$

$$-\frac{b}{2 \cdot a} = s$$



Andengradspolynomiet

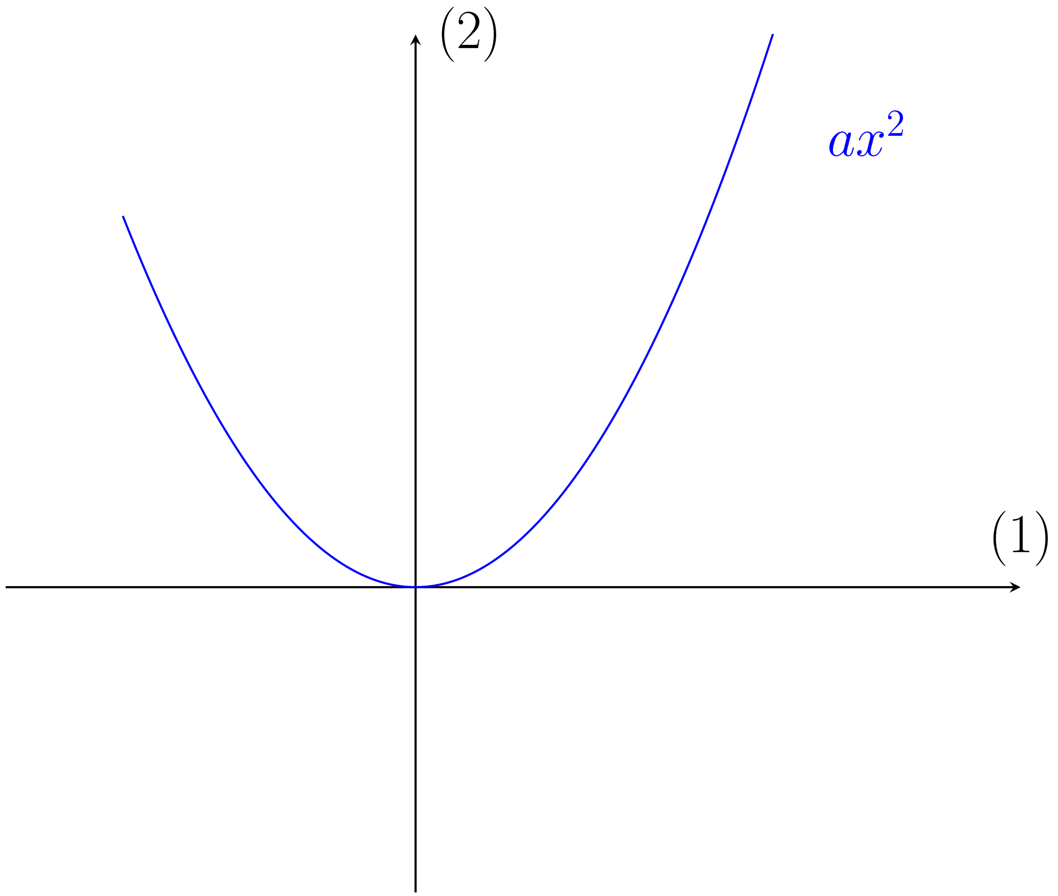
$$y = a \cdot x^2$$

Grafen er symetrisk om 2. aksen.

Andengradspolynomiet

$$y = a \cdot x^2$$

Grafen er symetrisk om 2. aksen.

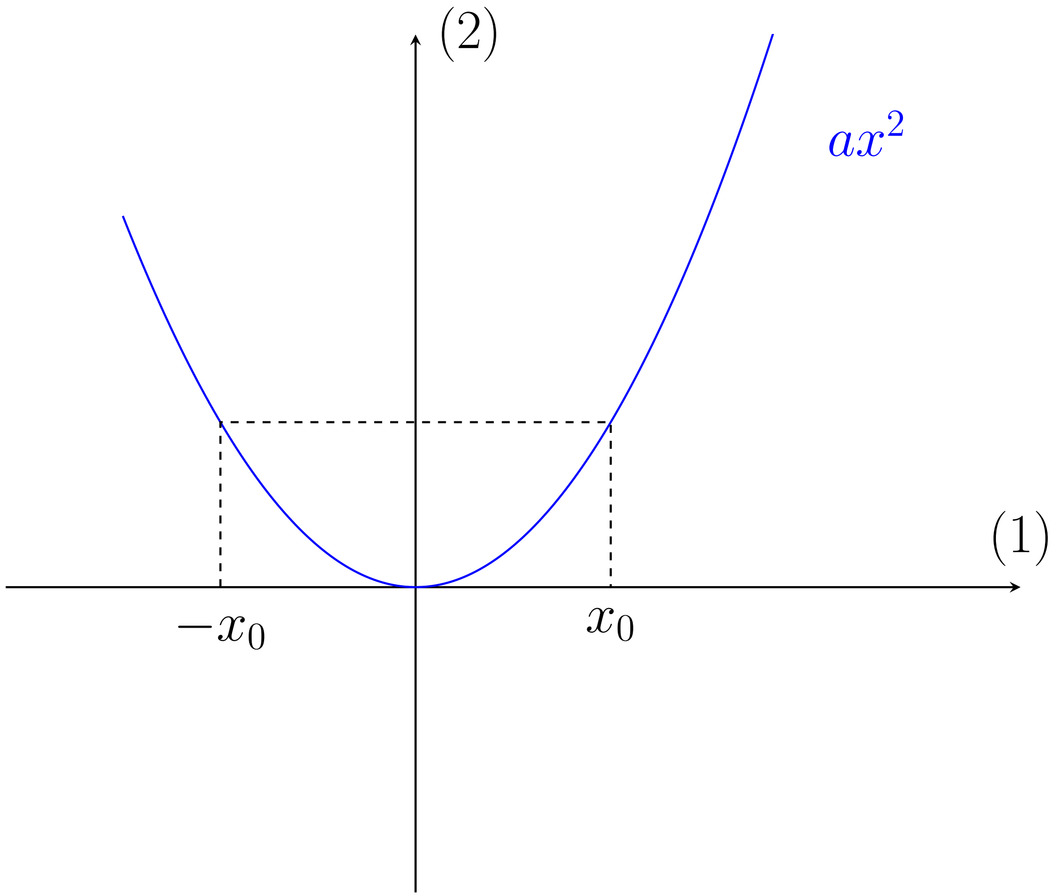


Andengradspolynomiet

$$y = a \cdot x^2$$

Grafen er symetrisk om 2. aksen.

$$y = a \cdot (x_0)^2$$



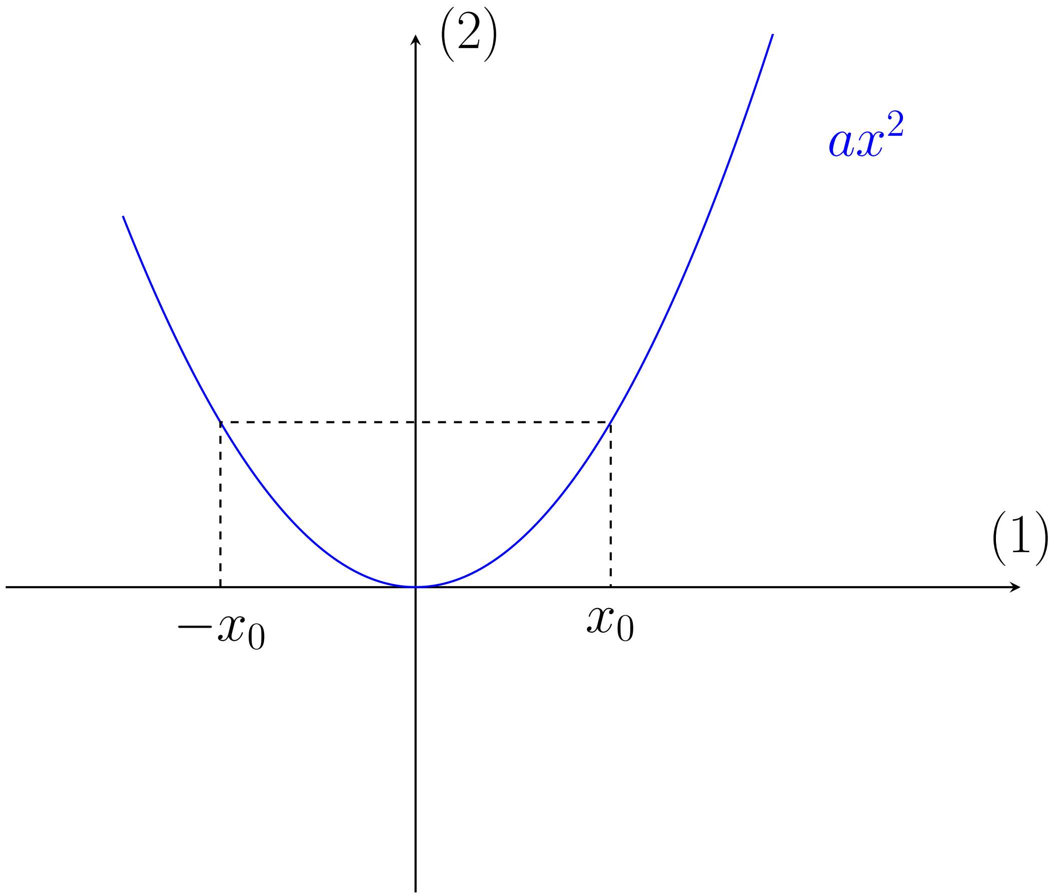
Andengradspolynomiet

$$y = a \cdot x^2$$

Grafen er symetrisk om 2. aksen.

$$y = a \cdot (x_0)^2$$

$$y = a \cdot (-x_0)^2$$



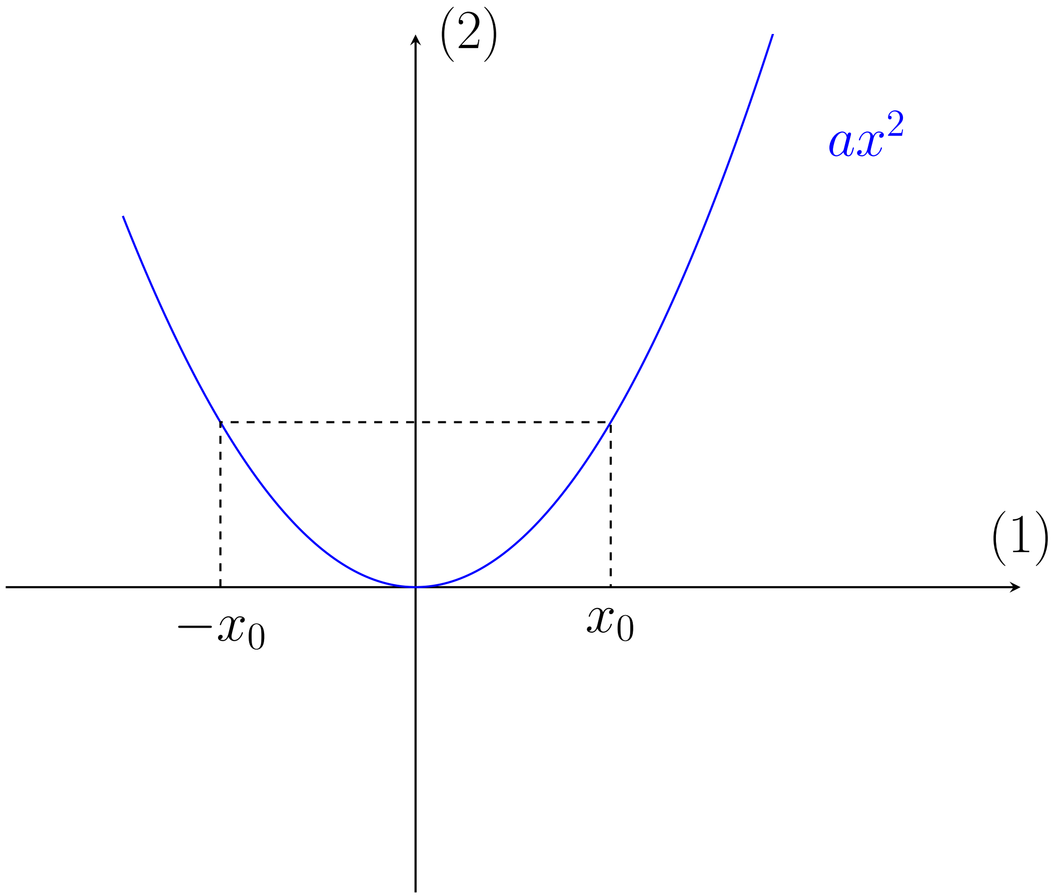
Andengradspolynomiet

$$y = a \cdot x^2$$

Grafen er symetrisk om 2. aksen.

$$y = a \cdot (x_0)^2$$

$$y = a \cdot (-x_0)^2 = a \cdot x_0^2$$



Andengradspolynomiet

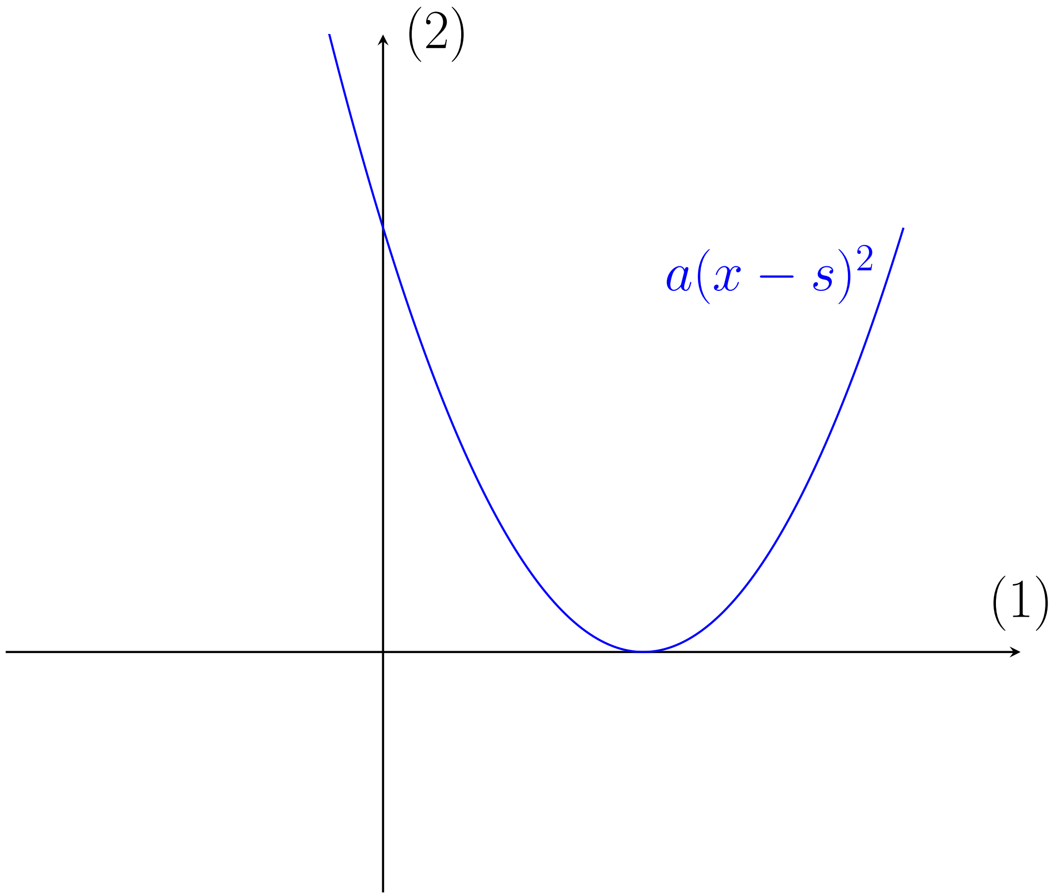
$$y = a(x - s)^2$$

er symetrisk om x-værdien s

Andengradspolynomiet

$$y = a(x-s)^2$$

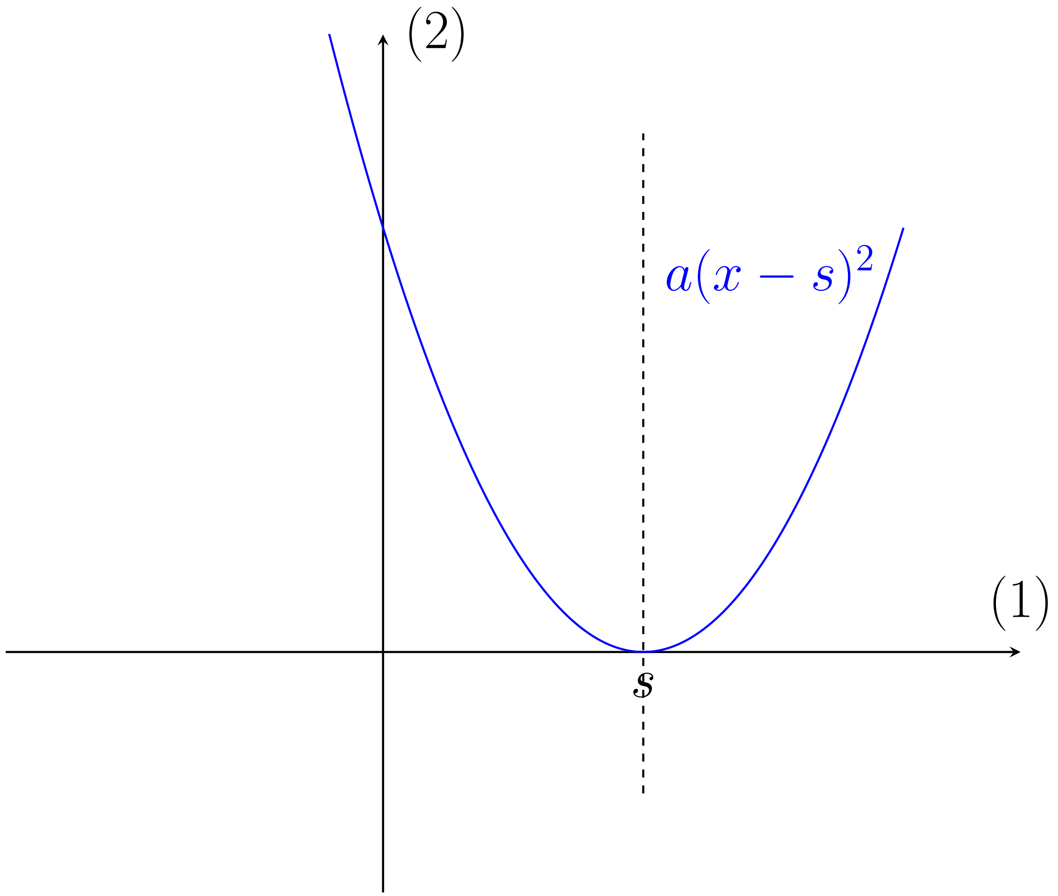
er symetrisk om x-værdien s



Andengradspolynomiet

$$y = a(x - s)^2$$

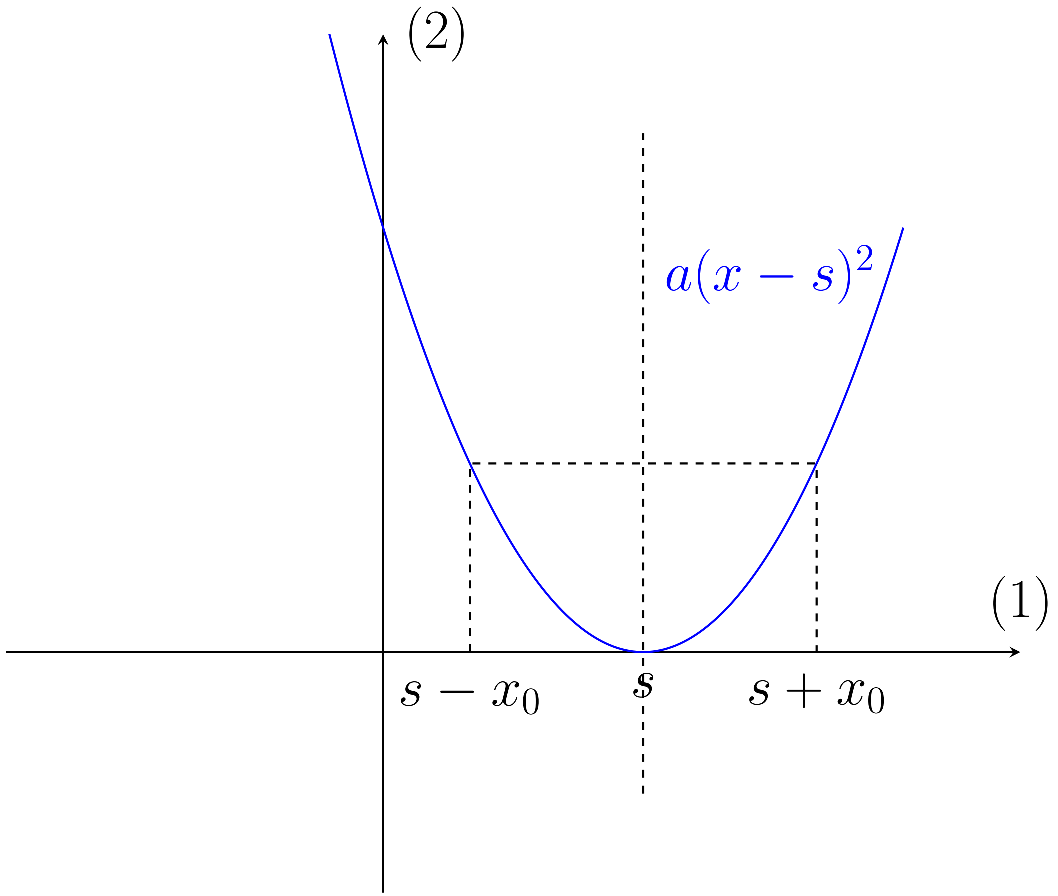
er symetrisk om x-værdien s



Andengradspolynomiet

$$y = a(x-s)^2$$

er symetrisk om x-værdien s

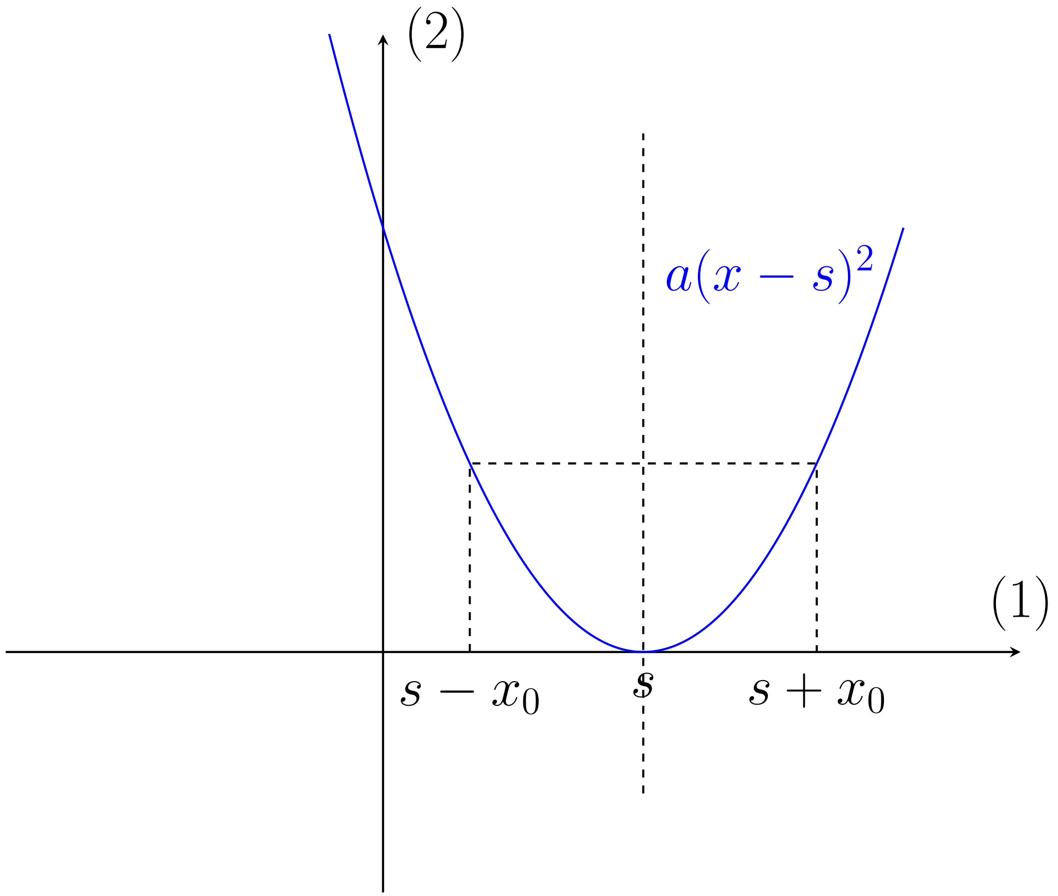


Andengradspolynomiet

$$y = a(x-s)^2$$

er symetrisk om x-værdien s

$$y = a \cdot ((s+x_0)-s)^2$$

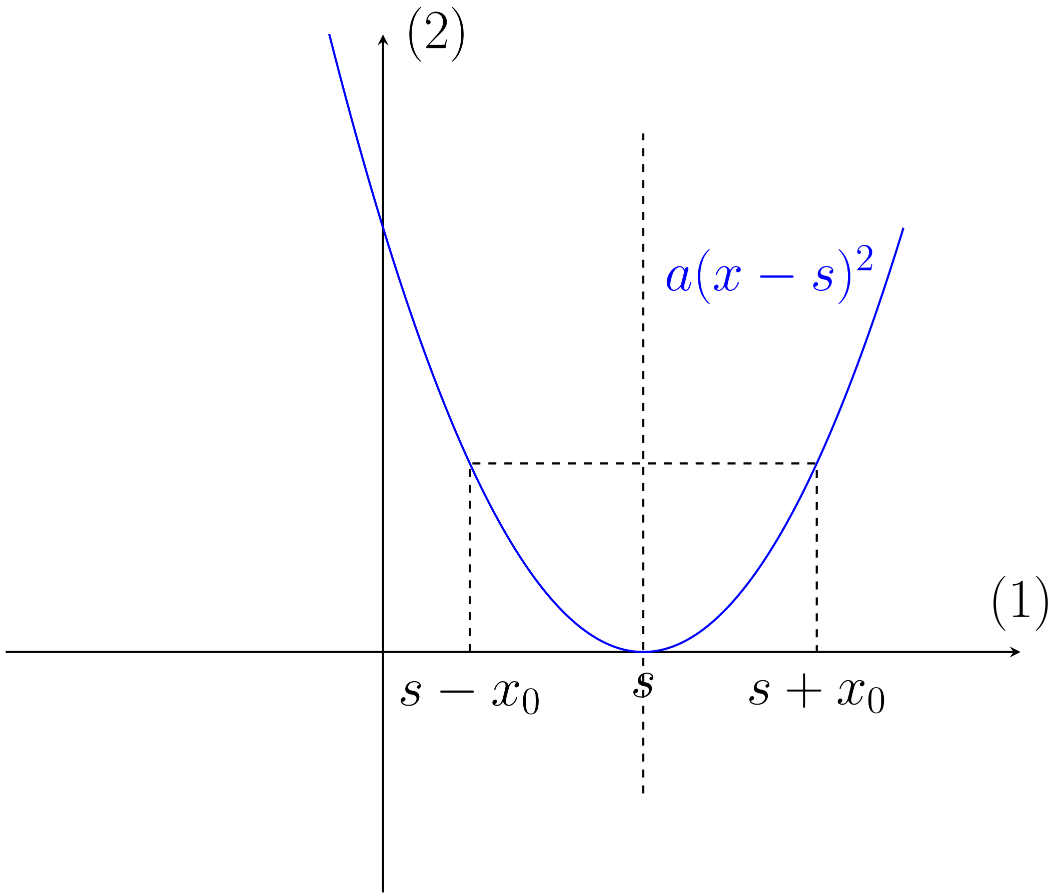


Andengradspolynomiet

$$y = a(x-s)^2$$

er symetrisk om x-værdien s

$$y = a \cdot ((s+x_0) - s)^2 = a \cdot (x_0)^2$$



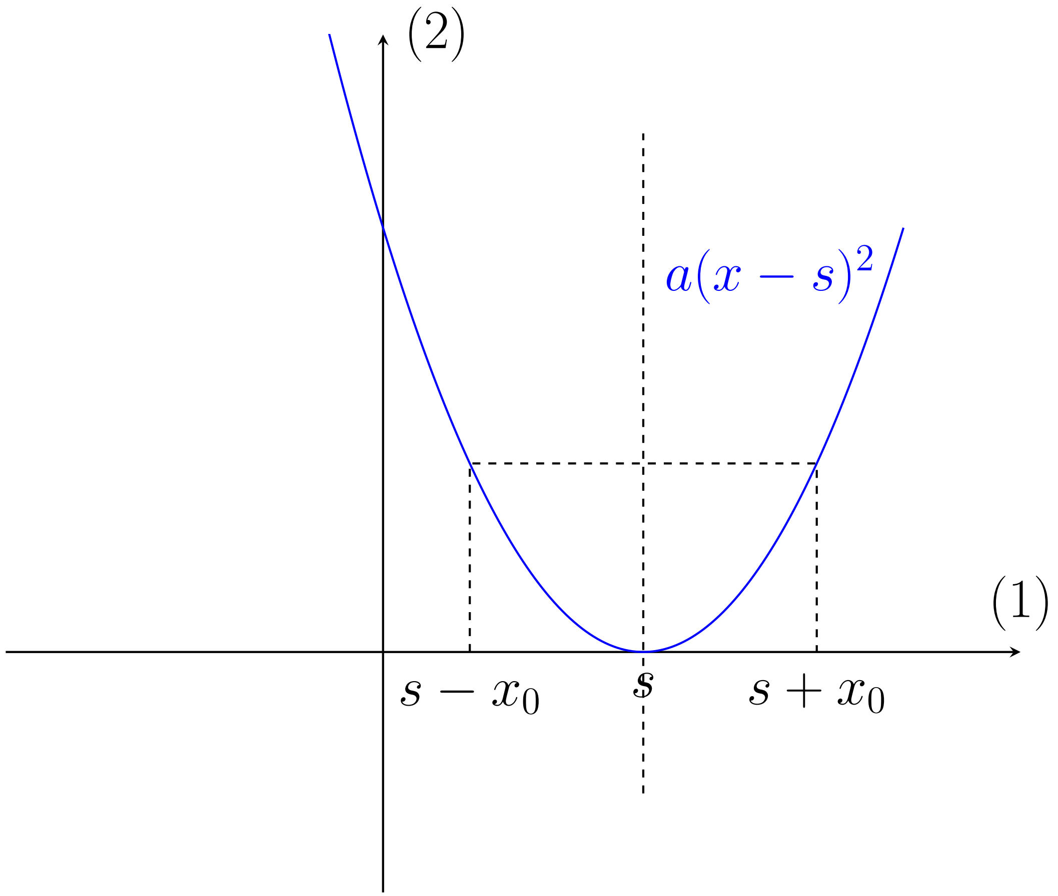
Andengradspolynomiet

$$y = a(x-s)^2$$

er symetrisk om x-værdien s

$$y = a \cdot ((s+x_0)-s)^2 = a \cdot (x_0)^2$$

$$y = a \cdot ((s-x_0)-s)^2$$



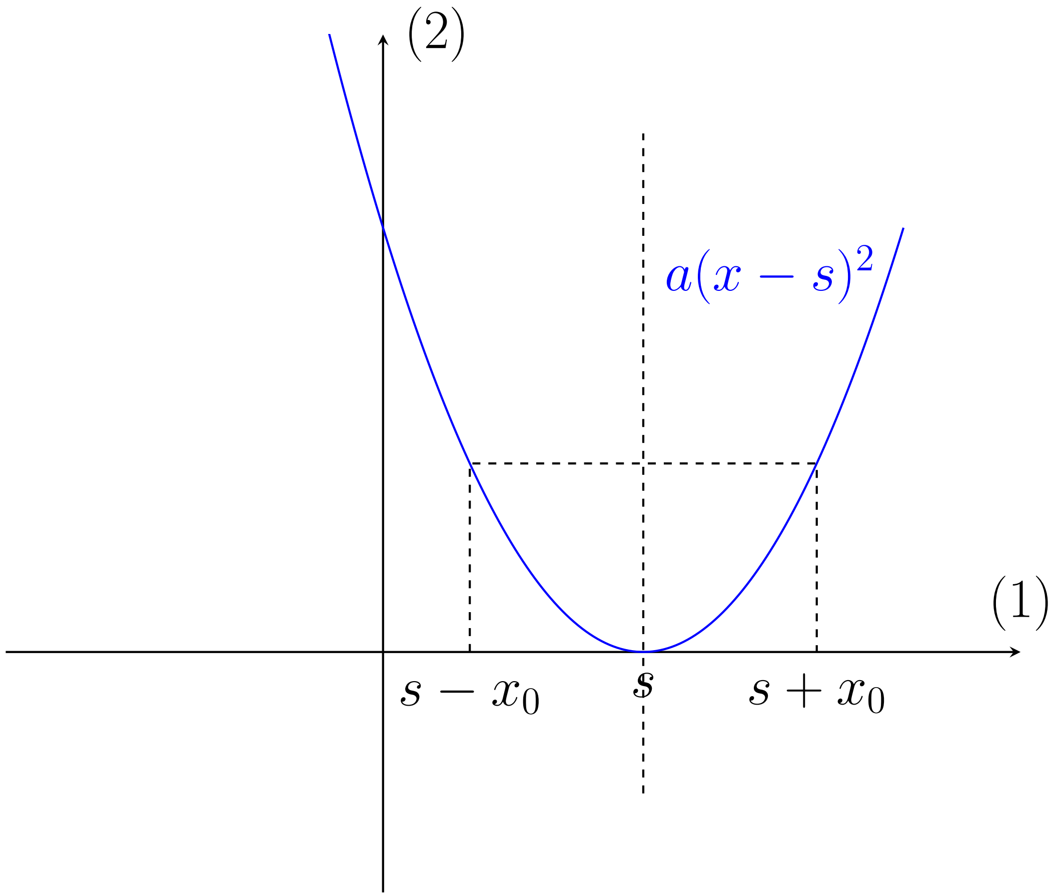
Andengradspolynomiet

$$y = a(x-s)^2$$

er symetrisk om x-værdien s

$$y = a \cdot ((s+x_0)-s)^2 = a \cdot (x_0)^2$$

$$y = a \cdot ((s-x_0)-s)^2 = a \cdot (-x_0)^2$$



Andengradspolynomiet

$$y = a(x-s)^2$$

er symetrisk om x-værdien s

$$y = a \cdot ((s+x_0)-s)^2 = a \cdot (x_0)^2$$

$$y = a \cdot ((s-x_0)-s)^2 = a \cdot (-x_0)^2 = a \cdot (x_0)^2$$
